2010-2011 Annual Report

SOIL AND WATER CONSERVATION SOCIETY

From the President

The annual report is a brief review of the health of our professional organization. Although it is only for the past year, it is a good snapshot in time of the Society's activities. Annual reports are intended to give members and other interested people information about the organization's accomplishments, stability, and general direction. This perspective is helpful as we plan for the future of the organization.

As you will see, our financial base is sound. Our business relationships, our networking, and our focus as a nonprofit professional organization that provides services to members are well exercised. We are always researching new ways to provide services to our members, grow and diversify the organization, and build our legacy for the future.

In 2010, we developed a five-year strategic plan, and we are using a detailed annual plan to define our strategy and make decisions on allocating our capital and human resources carefully. I use the term "we" to refer to the team of the Board of Directors and headquarters staff. We meet via teleconference monthly and face-to-face in the spring and at the annual conference to work through our various tasks that make this organization function effectively. We each have our responsibilities, but we call on each other frequently and work together well.

There are several areas on which we are focusing for the near-term future. One area is to increase and diversify our membership. The second area is to build our strength—our legacy—for the future. Soon we will begin a program of planned giving. As we worked to develop this program, many of us commented that this should have been in place many years ago. Look for more on this in next year's annual report and in coming announcements.

We recently instituted a weekly news service titled *Conservation NewsBriefs*. NewsBriefs is like a clipping service for members. It delivers the most relevant content to keep members up-to-date with news about soil and water conservation research, policy, etc. This new tool rounds out the communications options available to members.

You will also see a glimpse of our outstanding chapter activities. This is where members work creatively to bring people, agencies, and organizations together to address local, statewide, or regional resource issues. Locally, this kind of activity is the principal reason for joining an international professional organization. When you put that together with the support, training, conferences, networking, and many other tools and resources managed by our staff in the office in Ankeny, Iowa, you have an organization that is distinct from the rest. These are a few of the key features and qualities of the Soil and Water Conservation Society.

The Soil and Water Conservation Society was started 68 years ago by a group of professionals with a cause and a dream for the future. The people have changed, but our mission, dedication, and dreams for the future remain the same.

Bill Boyer

Bill Boyer

Who We Are

The Soil and Water Conservation Society (SWCS) is a nonprofit scientific and educational organization that serves as an advocate for natural resource professionals and for science-based conservation policy. The SWCS fosters the science and art of soil, water, and environmental management on working lands to achieve sustainability.

The SWCS includes over 5,000 members around the world. Society members promote and practice an ethic that recognizes the interdependence of people and their environment.

Board of Directors

(as of March 31, 2011)

William W. Boyer
President & Northeastern Director

Gary Steinhardt
Vice-President & East North Central Director

Clark Gantzer
Secretary & At Large Director

Dan Towery

Editorial Assistant

Annual Conference

The 65th International SWCS Annual Conference was held in St. Louis, Missouri, from July 18 to 21, 2010. There were 615 registered attendees for the meeting, which was the second largest meeting the Society has held in the past five years, just short of the 645 attendees in Tucson. Peter Kareiva, from The Nature Conservancy, spoke about Ecosystem Services during the Pritchard Lecture. More than 100 people attended the anniversary dinner celebrating 75 years of Soil Conservation Service/Natural Resources Conservation Service and 65 years of SWCS Annual Conferences. Additionally, SWCS and Natural Resources Conservation Service collaborated on the “F5 Food Drive” and collected 250 pounds of food for the St. Patrick Center in St. Louis, which is the largest provider of homeless services in Missouri. Highlights from the conference are online at <http://www.swcs.org/10ac>, including video of Peter Kareiva’s Pritchard Lecture, the slides from Nathaniel Ostrom’s talk from the “Gulf of Mexico Oil Spill Discussion” at the Tuesday Morning Coffee, attendee candid snapshots, and tour pictures.

The Chief Scientist for The Nature Conservancy Peter Kareiva delivers the Pritchard Lecture

At the anniversary dinner celebrating 75 years of Soil Conservation Service/Natural Resources Conservation Service. From left to right: Paul Johnson, NRCS Past Chief (1993-1997); Gary Steinhardt, SWCS Vice-President; William W. Boyer, SWCS President; David White, NRCS Chief (2010-present); Jim Gulliford, SWCS Executive Director.

SWCS and NRCS collaborated on the “F5 Food Drive” and collected 250 pounds of food for the St. Patrick Center in St. Louis. From left to right: Bonnie Allely, USDA NRCS National Volunteer Liaison, and Jim Gulliford, SWCS Executive Director.

Specialty Conferences

Managing Agricultural Landscapes for Environmental Quality II: Achieving More Effective Conservation

As part of a continued effort to improve conservation effectiveness, the SWCS hosted the Managing Agricultural Landscapes for Environmental Quality II: Achieving More Effective Conservation (MAL II) workshop in April, 2010. The workshop featured lead and supporting papers, poster presentations, and roundtable discussions. All of the papers from the meeting were compiled for a postworkshop book (edited by Pete Nowak and Max Schnepf) which was published by SWCS in 2010. The main themes that emerged were precision conservation, precision regulation, and the need for monitoring and adaptive management.

Sustainable Feedstocks for Advanced Biofuels

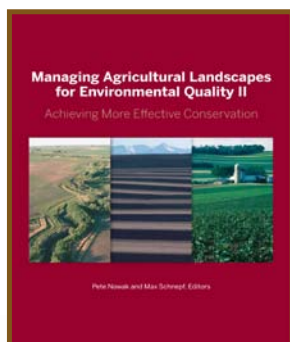

Held in Atlanta, Georgia, from September 28 to 30, 2010, the SWCS-sponsored Sustainable Feedstocks for Advanced Biofuels workshop was designed to gather experts to produce regional roadmaps for sustainable production of biofuels. The

organizing committee identified 23 issues to be addressed as presentations at the workshop and developed as chapters for a post-workshop publication. Six groups were formed to develop regional roadmaps, dividing the United States into sections with similar challenges, climates, and resources. The regional roadmaps were released online in March 2011 and can be downloaded at <http://www.swcs.org/roadmap>.

Modeling Summit 2011

Held in Denver, Colorado, from March 29 to 31, the SWCS Modeling Summit 2011: Advancing the Science of Modeling gathered about 75 agency, university, nonprofit, and private business participants. The conference was organized to get key stakeholders together to talk about the best way to utilize and integrate available models and datasets to address specific conservation and conservation benefit needs. The postsummit work of the participants included continued refinement of the small group discussion points. More information as well as most of the PowerPoint presentations from the presenters are available online at <http://www.swcs.org/modelingsummit>.

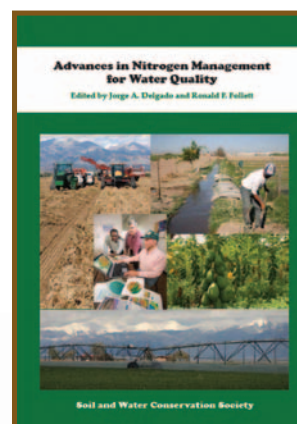

New on the Bookshelf

168 pages, softbound

Managing Agricultural Landscapes for Environmental Quality II, edited by Pete Nowak and Max Schnepf, builds on the first conference and book by going beyond the science of conservation program implementation to examine the effectiveness of practice

application, beginning with the tools and methods used to identify vulnerable areas, manage environmental risk, and target risky behaviors. Monitoring and evaluation of current practices reveal that agricultural practices are only “sustainable” when viewed in the context of the landscape in which they are used. What effectively controls runoff in one landscape position may not be successful in another. Efforts must be targeted and strategic to be effective.

424 pages, hardcover

Advances in Nitrogen Management for Water Quality, edited by Jorge A. Delgado and Ronald F. Follett, is the result of a collaborative effort between SWCS and the Soil Science Society of America. The authors of the 15 chapters review some of the newest advances in nitrogen management and explain how these advances can potentially reduce nitrogen losses to the

environment. Several management practices and principles presented in this book can be applied across continents and/or regions and show that nitrogen use efficiencies can be increased while maintaining agricultural production levels. This book covers a few of the new tools and concepts that can be used to evaluate nitrogen management practices and ultimately to increase nitrogen use efficiencies.

Journal of Soil and Water Conservation

Published since 1946, the *Journal of Soil and Water Conservation* (JSWC) is the Society's flagship publication, with a circulation to over 5,000 individuals and libraries worldwide. The journal serves as an important international multidisciplinary forum to promote creative thinking and investigation of conservation issues.

The journal has two sections designed to engage a diverse readership: a front section containing features, perspectives, and articles on practice, and a research section containing peer-reviewed applied research papers.

The online option, <http://www.jswconline.org>, provides access to all JSWC journals back to 1981. The online journal has increased the visibility, use, and citation of the journal internationally. Since October 2008, over 95,000 people have visited the JSWC home page, and over 630,000 people have viewed article abstracts.

We also use an online manuscript review system. Authors need to register and submit their manuscripts at <http://www.editorialmanager.com/jswc>.

Grassroots/Chapter Action

The SWCS has 75 chapters across the United States and Canada. The local chapters undertake a diverse set of grassroots activities. A few examples of SWCS chapter activities in the past year are listed below.

The Hoosier Chapter conducted two workshops that engaged chapter members as well as nonchapter participants. One workshop discussed pollinators, their ecology, life cycles, and habitats. The second workshop and tour was to a wetland restoration site of regional ecological importance. These activities exemplify how SWCS chapters are expanding members' knowledge and skills to incorporate a systems approach to enhance the environment and provide multiple benefits.

The Empire State Chapter, since its formation in 1946, has been successful in developing a significant conservation message through multiple programs. The chapter is being recognized for sustained performance, particularly for long-term efforts to weave professional and leadership development opportunities for chapter members into annual technical sessions. The chapter is a recognized resource in providing stormwater publications that are utilized by thousands of stakeholders, including agricultural users, engineers, municipalities, and regulators.

The North Dakota Chapter is recognized for their initiative in organizing many successful workshops over the past five years to bring together multiple stakeholders to address current issues. They have partnered with others to hold

workshops on (1) Pollinator conservation planning on working lands, (2) Tools of assessment, adaptation strategies, and implications of soil change, and (3) Energy: The spark of the future.

The Oklahoma Chapter has a long history of promoting conservation and providing networking opportunities for educators, conservationists, researchers, and others. The chapter cosponsored educational and networking activities targeted at life-long learning of agricultural land owners and natural resource professionals at events such as the Oklahoma No-Till Conference and the Governor's Water Conference. Their annual conferences have included such diverse topics as nutrient management issues associated with poultry production, the next-generation conservation plant materials and technologies, and connecting consumers with locally grown food.

The Firman E. Bear Chapter addressed a global resource concern of increasing importance through their Leadership and Technology Workshop held in 2010. Key conservation energy topics and leadership skill development provided a forum to promote awareness of their chapter as a leader in resource education and professional development.

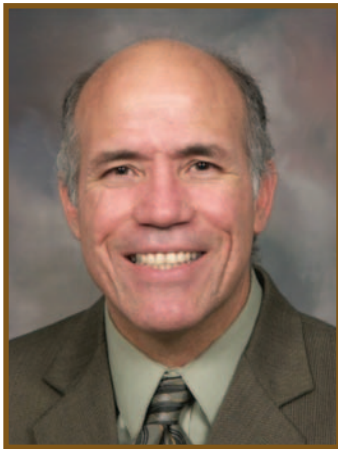

Awards and Honors

The SWCS was pleased to present the following awards at the SWCS 2010 Annual Conference in St. Louis, Missouri.

Hugh Hammond Bennett Award

The Hugh Hammond Bennett Award recognizes extraordinary national and international accomplishments in the conservation of soil, water, and related natural resources.

2010 Recipient: Jorge A. Delgado

Jorge A. Delgado

Jorge A. Delgado is a soil scientist with the USDA Agricultural Research Service Soil Plant Nutrient Research Unit and research editor of the *Journal of Soil and Water Conservation*. Dr. Delgado is a Fellow of the American Society of Agronomy, Soil Science Society of America, and Soil and

Water Conservation Society. He is internationally recognized for his research and development of applied environmental quality tools and concepts designed to mitigate the losses of nitrates from agriculture, such as the nitrogen index, a nitrogen trading tool, precision conservation, breakthrough isotopic research techniques, and summer cover crops with limited irrigation.

He is an expert in developing and testing tools designed to assess nitrogen losses to the environment. He works closely with extension personnel and national and international scientists in transferring research information to real world use. For example, he led the first field study that examined the use of controlled-release fertilizers as a mitigation tactic to decrease nitrous oxide emissions in the United States. His research showed that Colorado cover crops with limited irrigation could reduce nitrate leaching to the environment,

reduce erosion, increase nutrient use efficiencies and increase potato quality and yields. As a result, farmers have expanded the use of cover crops on thousands of acres, improving soil and water quality.

Working with scientists from as many as 13 countries, his collaborative partnerships have produced cutting-edge advances in agriculture, agronomy, nutrient management, and natural resource conservation that have proven applicable from farm fields to the global agricultural and ecological environment. His achievements have already brought him the Soil Science Society of America 2008 Applied Research Award and the Soil Science Society of America 2009 International Soil Science Award.

Fellow Award

The designation of Fellow is conferred on Society members who have performed exceptional service in advocating the conservation of soil, water, and related natural resources. This award is given first and foremost for professional excellence. Professional achievement may be in practicing, investigating, administering, or teaching soil and water conservation or closely related fields. Only Society members with at least 10 years of membership are eligible.

2010 Recipients: Deborah Cavanaugh-Grant, Joel Meyers, Cal Thorson

Harold and Kay Scholl Excellence in Conservation Award

The Harold and Kay Scholl Excellence in Conservation Award recognizes individuals who provide technical assistance and demonstrate effectiveness and creativity in conservation planning and plan application.

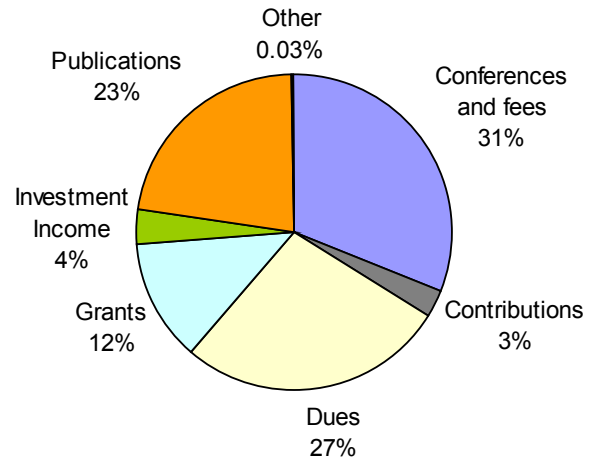

2010 Recipient: Kenneth J. Miller
