This is a reminder to check your water control structure (WCS) stop board settings to the fallow season setting following your harvest.

Adjust WCS at SWCS 1 to harvest settings found in your O&M plan to 28 inches below the rim of the WCS.

This represents 44 inches of stop boards in place which would be 2 - 7 inch stop boards and 6 - 5 inch stop boards.

Your previous setting should have been fully open for harvest.

Your next management setting will take place March 15th or 2 weeks prior to spring field activities.

Thank you for improving Iowa's water quality.
